Support for the moment you're in

Safe Circle provides a suite of tools for emergency response and everyday peace of mind, all requiring user initiation.

Immediate Assistance

Direct access to local emergency services dialer and a high-visibility **SOS countdown** to prevent accidental triggers while ensuring fast help.

Trusted Network

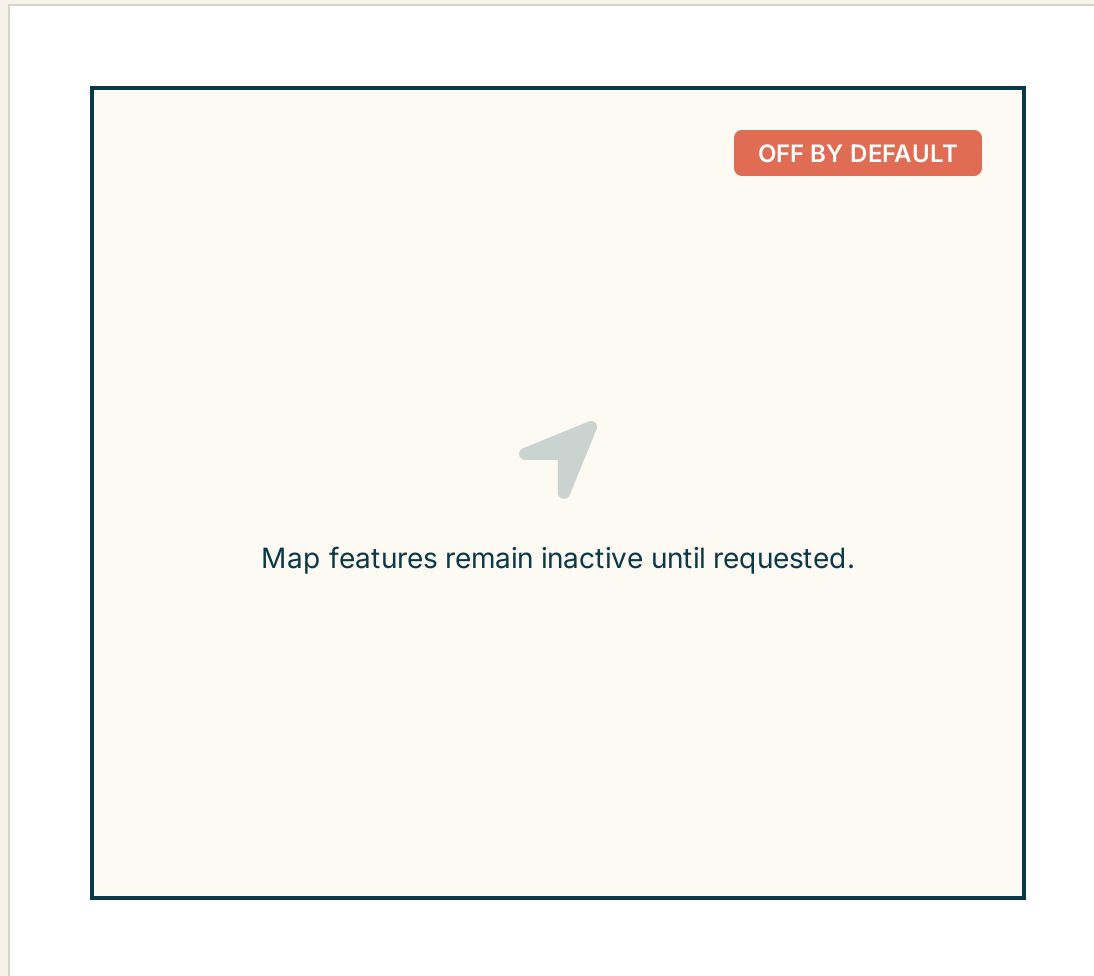

Connect with a personal circle to share **live location** during journeys or use the safety timer to let them know when you're home.

Proactive Safety

Deter attention with a **manual siren** or exit uncomfortable situations using the built-in fake call tool—no false promises, just practical tools.

Location on your terms

Safe Circle Product Overview

✓ Privacy-First Map

Location is off by default. Safe Circle only asks for map access when you want to find nearby support or share your trip with a trusted contact.

✓ Nearby Support

Verified Facilities

Quickly locate the nearest police stations, hospitals, and safe public places without continuous background tracking.

✓ Informed Travel

Use the safety check-in timer before traveling to ensure someone knows you're okay, with all location sharing strictly limited to the journey duration.

Designed around informed choice

Safety is about having the right information and the absolute power to choose when and how it is shared.

Privacy Promise

Sensitive information is encrypted in transit and at rest. We never track you continuously unless a specific safety feature is active.

Full Control

Manage biometric locks, emergency info, and granular permissions. You decide who sees your location and for how long.

Practical Guidance

Context-aware advice for harassment, unsafe travel, or being followed, keeping practical support close without guessing.

Note: Safe Circle is currently a prototype. Always verify local emergency numbers and resource availability before relying on them in a real emergency.
